

High-quality real-time video, for any audience size

Real-time streaming at scale made easy

Transcoding

For each stream, THEOlive will create multiple bitrates/resolutions.

DRM

Protect your real-time streams with studio approved DRM.

CDN

Deliver the live stream to your viewers worldwide through global CDN POPs, and easily handle flash crowds.

Player

Leverage the embed script to get started in minutes or use the player from NPM/Maven/CocoaPods for more customization.

Viewer Insights

Monitor the number of viewers, latency, viewer locations and devices in use.

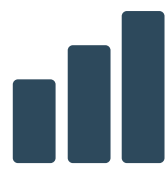

Sub-second latency

Stream real-time to your viewers

API-first approach

Easily integrate into your solution

Highly scalable

Stream to a virtually unlimited number of viewers

All you need in one platform

Real-time streaming

Stream at sub-second latency to avoid spoiler effects and to create interactive experiences.

Cross-platform support

Stream across Web, Android, iOS/tvOS platforms, smart TV, and set-top boxes. We also support React Native and Flutter.

Multiple ingest methods

Ingest any RTMP(S) or SRT. Easily get you started with our documentation guides.

Viewer insights

Monitor and analyze live and historic metrics to measure the success of your live stream.

Bitrate-based pricing

Configure your resolution / bitrate and FPS based on your use case. Stream in SD, HD or UHD.

Ingest monitoring

Easily monitor bitrate and FPS of your RTMP(S) or SRT ingest.

Global infrastructure

Deliver high-quality real-time video to any audience size and easily handle flash crowds through our global CDN POPs.

Security

Protect your sub-second latency streams through channel failover, geoblocking, token-based security and studio-approved DRM.

Developer-centric

Accelerate your implementation through powerful APIs and our extensive documentation archive.

Webhooks

Receive real-time event updates for your channel; no need to poll for status.

Multi-channel

Set up multiple player aliases for your channel, each with a different look & feel, target latency and geoblocking requirements.

Scheduler

Plan your events ahead and define channel start time. Consult the scheduler report to get insights into your individual event.

Want to start streaming to your viewers in real-time?

Request your THEOlive account, and get started today.
